SUSTAINABILITY

The UN sustainable development goals are highly important, and we are happy to say that we had been following them for decades before they were even created.

CRAFTSMANSHIP

We appreciate our craftsmanship heritage: the structural solutions have been tested for centuries in everyday use. Our furniture is designed to be used in contract environments, which means extra challenges for the structures.

LONGEVITY

High quality design, timeless esthetic and durability ensure, that the products can be used for decades - or centuries. As an investment, a design piece will sustain its value, so it can be sold forward to a new happy owner when that is the best option.

ENERGY

Our studio workshop uses hydropower as its 100% source of electricity: we have a hydro power plant located next to our building. Also our subcontractors are following green energy policies.

FREIGHTS

We collaborate with global freight forwarders that compensate harmful emissions and continuously search for better, improved ways to take care of the transportation.

RAW MATERIAL

We use certified raw materials, always knowing the origin of our wood. To ensure durability and reliability, we select only the highest-quality components. Every product is crafted with care in Finland and neighbouring Estonia.

MINIMISING THE WASTE

Our goal is to minimise landfill waste across all operations. In the design phase, we aim to use raw materials as efficiently as possible, developing smart solutions that reduce offcuts. Any remaining wood is directed to the production of smaller components, ensuring that valuable material is not wasted. Office and kitchen waste is efficiently recycled through the Finnish recycling system.

BIODIVERSITY

We donate part of our sales profit to protect the biodiversity of the global forests. This way we want to help the small animals and plants - flora and fauna - where their natural habitat is threatened.
